The information given here is provided by the IMA Commission on New Minerals, Nomenclature and Classification for comparative purposes and as a service to mineralogists working on new species.

Each mineral is described in the following format:

**Mineral name, if the authors agree on its release prior to the full description appearing in press**

Chemical formula

Type locality

Full authorship of proposal

E-mail address of corresponding author

Relationship to other minerals

Crystal system, Space group; Structure determined, yes or no

Unit-cell parameters

Strongest lines in the X-ray powder diffraction pattern

Type specimen repository and specimen number

Citation details for the mineral prior to publication of full description

**Citation details concern the fact that this information will be published in the *European Journal of Mineralogy* on a routine basis, as well as being added month by month to the Commission's web site.**

**It is still a requirement for the authors to publish a full description of the new mineral.**

NO OTHER INFORMATION WILL BE RELEASED BY THE COMMISSION

### NEW MINERAL PROPOSALS APPROVED IN FEBRUARY 2017

**NOMENCLATURE PROPOSAL  
APPROVED IN FEBRUARY 2017**
**Graftonite group**

The graftonite group has been established. The rootname “graftonite” is adopted for minerals with  ${}^{M2,M3}Fe^{2+} > {}^{M2,M3}Mn^{2+}$ , the rootname “beusite” for minerals with  ${}^{M2,M3}Mn^{2+} > {}^{M2,M3}Fe^{2+}$ . Graftonite is redefined as  $Fe^{2+}Fe_2^{2+}(PO_4)_2$ . Beusite is redefined as  $Mn^{2+}Mn_2^{2+}(PO_4)_2$ . Three potential new minerals belonging to the graftonite group are anticipated.

**NOMENCLATURE PROPOSAL  
APPROVED IN MARCH 2017**
**IMA 17-A: Swamboite** (redefined and renamed)

Proposal 17-A is accepted, and swamboite is renamed to swamboite-(Nd). Swamboite was originally described as a new mineral with a formula  $U_{0.333}H_2(UO_2SiO_4)_2 \cdot 10H_2O$ . However, new chemical analyses of the type material indicate that swamboite contains REEs, and dominantly  $Nd^{3+}$ , as an essential constituent. The revised chemical formula of swamboite-(Nd) is  $Nd_{0.333}[(UO_2)(SiO_3OH)](H_2O)_{\sim 2.5}$ .
