The information given here is provided by the Commission on New Minerals and Mineral Names, I.M.A., for comparative purposes and as a service to mineralogists working on new species.

Formerly, each mineral was described in the following format:

- IMA number
- Type locality
- Corresponding author
- Chemical formula
- Relationship to other minerals
- Crystal system, Space group; Structure determined, yes or no
- Unit-cell parameters
- Strongest lines in the X-ray powder diffraction pattern

The name of the approved species was considered confidential information until the authors have published their descriptions or released information themselves.

Early in 2010 the Commission completed voting on proposal 09-D (The Early Publication of New Mineral Names). This has resulted in a change to the release of information concerning recently approved minerals. The change is as follows.

- 1. Authors may elect to the release of the following list of data, with the exception of the mineral name, which will remain confidential until publication.**
- 2. Authors may elect to permit the release of the mineral name upon approval and the other data given in the list below.**

IMA number

Mineral name, if the authors agree on its release prior to the full description appearing in press

Chemical formula

Type locality

Full authorship of proposal

E-mail address of corresponding author

Relationship to other minerals

Crystal system, Space group; Structure determined, yes or no

Unit-cell parameters

Strongest lines in the X-ray powder-diffraction pattern

Type specimen repository and specimen number

Citation details for the mineral prior to publication of full description

Citation details concern the fact that this information will be published in the *Mineralogical Magazine* on a routine basis, as well as being added month by month to the Commission's web site.

NO OTHER INFORMATION WILL BE RELEASED BY THE COMMISSION

2010 PROPOSALS

IMA No. 2010-053

Billwiseite

Nanga Parbat-Haramosh massif at Stak Nala, Pakistan (35°44'37"N 75°02'35"E)

Frank C. Hawthorne*, Fernando Cámara, Mark A. Cooper, Neil A. Ball, Petr Černý and Brendan M. Laurs

*E-mail: frank_hawthorne@umanitoba.ca

New structure type

Monoclinic: $C2/c$; structure determined

$a = 54.206(6)$, $b = 4.9163(5)$, $c = 5.5540(6)$ Å, $\beta = 90.396(2)^\circ$

3.500(51), 3.154(90), 3.017(100), 2.462(23), 1.906(47), 1.828(30), 1.735(30), 1.662(53)

APPROVALS WITHDRAWN

IMA No. 2010-049

Approval for the mineral IMA 2010-049 (“steedeite”) has been withdrawn. Further investigations have shown that the mineral is identical to catapleiite.

GENERAL NOMENCLATURE PROPOSALS

IMA 11-A

The proposal on the correction of the brunogeierite formula and change of its classification is accepted. The ideal end-member formula of brunogeierite becomes $(\text{Fe}^{2+})_2\text{Ge}^{4+}\text{O}_4$. The mineral should be classified as a nesogermanate, a member of the ringwoodite group.
