The information given here is provided by the IMA Commission on New Minerals, Nomenclature and Classification for comparative purposes and as a service to mineralogists working on new species.

Each mineral is described in the following format:

- mineral name, if the authors agree on its release prior to the full description appearing in press;
- chemical formula;
- type locality;
- full authorship of proposal;
- e-mail address of corresponding author;
- relationship to other minerals;
- crystal system, space group, structure determined, yes or no;
- unit-cell parameters;
- strongest lines in the X-ray powder diffraction pattern;
- type specimen repository and specimen number;
- citation details for the mineral prior to publication of full description.

Citation details concern the fact that this information will be published in the *European Journal of Mineralogy* on a routine basis, as well as being added month by month to the commission's web site.

It is still a requirement for the authors to publish a full description of the new mineral.

No other information will be released by the commission.

3 Nomenclature/classification proposals approved in July 2020

IMA 20-C: Crystal structure and redefinition of utahite

Proposal 20-C is accepted, and the formula of utahite is redefined from $\text{Cu}_5^{2+}\text{Zn}_3(\text{Te}^{6+}\text{O}_4)_4(\text{OH})_8 \cdot 7\text{H}_2\text{O}$ to $\text{MgCu}_4^{2+}\text{Zn}_2\text{Te}_3^{6+}\text{O}_{14}(\text{OH})_4 \cdot 6\text{H}_2\text{O}$

Margarosanite group

The margarosanite group is established and includes the three isostructural members: margarosanite, walstromite, and breyite.

Pascoite family

The pascoite family is established and consists of 20 V minerals. The family consists of the pascoite and lasalite groups as well as a number of ungrouped members. In addition, the formula of rakanite has been revised from $\text{Na}_3[\text{H}_3\text{V}_{10}\text{O}_{28}] \cdot 15\text{H}_2\text{O}$ to $(\text{NH}_4)_3\text{Na}_3[\text{V}_{10}\text{O}_{28}] \cdot 12\text{H}_2\text{O}$.
