

IMA Commission on New Minerals, Nomenclature and Classification (CNMNC) – Newsletter 61

Ritsuro Miyawaki¹, Frédéric Hatert², Marco Pasero³, and Stuart J. Mills⁴

¹Chairman, CNMNC | Department of Geology, National Museum of Nature and Science,
4-1-1 Amakubo, Tsukuba 305-0005, Japan

²Vice-Chairman, CNMNC | Laboratoire de Minéralogie, Université de Liège,
Bâtiment B18, Sart Tilman, 4000 Liège, Belgium

³Vice-Chairman, CNMNC | Dipartimento di Scienze della Terra, Università di Pisa,
Via Santa Maria 53, 56126 Pisa, Italy

⁴Secretary, CNMNC | Geosciences, Museum Victoria, P.O. Box 666, Melbourne, Victoria 3001, Australia

Correspondence: Marco Pasero (marco.pasero@unipi.it)

Received: 27 May 2021 – Published: 1 June 2021

The information given here is provided by the IMA Commission on New Minerals, Nomenclature and Classification for comparative purposes and as a service to mineralogists working on new species.

Each mineral is described in the following format:

- mineral name, if the authors agree on its release prior to the full description appearing in press;
- chemical formula;
- type locality;
- full authorship of proposal;
- e-mail address of corresponding author;
- relationship to other minerals;
- crystal system, space group, structure determined, yes or no;
- unit-cell parameters;
- strongest lines in the X-ray powder diffraction pattern;
- type specimen repository and specimen number;
- citation details for the mineral prior to publication of full description.

Citation details concern the fact that this information will be published in the *European Journal of Mineralogy* on a routine basis, as well as being added month by month to the commission's website.

It is still a requirement for the authors to publish a full description of the new mineral.

No other information will be released by the commission.

1 New mineral proposals approved in April 2021

IMA no. 2020-097

Liguowuite

WO_3

Nanyang Village, Huaping County, Yunnan Province, Panzhihua-Xichang region, China ($26^{\circ}46'18.21''\text{N}$, $101^{\circ}27'13.86''\text{E}$)

Yuan Xue*, Ningyue Sun, Hongping He, Aiqing Chen, and Yiping Yang

*E-mail: xue.yuea@163.com

Known synthetic analogue

Monoclinic: $P2_1/n$; structure determined

$a = 7.3258(2)$, $b = 7.5477(2)$, $c = 7.7113(2)\text{ \AA}$,
 $\beta = 90.678(3)^\circ$
 $3.855(88)$, $3.768(88)$, $3.659(100)$, $3.104(20)$, $2.693(43)$,
 $2.626(60)$, $1.827(32)$, $1.645(27)$

Type material is deposited in the mineralogical collections of the Geological Museum of China, Xisi, Yangrou Hutong No. 15, Beijing 100083, People's Republic of China, catalogue number M16121 (holotype), and the Crystal Structure Laboratory, China University of Geosciences, Beijing 100083,

People's Republic of China, catalogue number NY-5-3Z (co-type)

3 Confirmation of siderazot as a valid species

In the IMA List of Minerals siderazot is tagged as Q (i.e. questionable), for the reason that no data on that mineral have been published since the original description (*Ann. Phys. Chem.*, 157, 165–172, 1876). Recently a detailed study on holotype siderazot, which is preserved in the Natural History Museum, London (UK), was carried out (*Minerals*, 11, art. 290, 2021). New chemical (EMPA) and structural (Rietveld) data were obtained. Moreover Raman and reflectance data are given. The complete set of data indicate that siderazot possesses the ε - Fe_3N -type structure. In the light of these new data the status of siderazot can be changed from Q to Rd

(i.e. redefined). The chemical formula of siderazot is slightly modified from FeN_x (with $x \approx 0.25$ –0.5) to $\text{Fe}_3\text{N}_{1.33}$.

4 Nomenclature/classification proposals approved in May 2021

4.1 IMA 21-A: discreditation of the mineral name hartite and reinstatement of the name branchite

Proposal 21-A is accepted, and the mineral name hartite is discredited and replaced by the name branchite, which has historical priority.

4.2 IMA 21-B: redefinition of gunterite

Proposal 21-B is accepted, and the ideal formula of gunterite is revised from $\text{Na}_4(\text{H}_2\text{O})_{16}(\text{H}_2\text{V}_{10}\text{O}_{28}) \cdot 6\text{H}_2\text{O}$ to $\text{Na}_4\text{Ca}[\text{V}_{10}\text{O}_{28}] \cdot 20\text{H}_2\text{O}$, based on new structural data and electron-probe microanalyses.

4.3 IMA 21-C: redefinition of jixianite as hydroplumboelsmoreite

Proposal 21-C is accepted, and the questionable species jixianite is renamed hydroplumboelsmoreite. The mineral hydroplumboelsmoreite belongs to the pyrochlore supergroup and has the simplified formula $(\text{Pb},\text{Fe}^{3+})_2(\text{W},\text{Fe}^{3+})_2\text{O}_6(\text{H}_2\text{O})$. More specifically it belongs to the elsmoreite group (W^{6+} dominant at the B site), with Pb dominant at the A site and H_2O dominant at the anionic Y site.

4.4 Mineral symbols

The proposal to establish mineral symbols has been approved. All existing mineral species have been assigned a symbol. The list of current mineral symbols will be available and kept up to date on the CNMNC website. Mineral symbols will now be required in all new mineral proposals.
